Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-10 rejected under 35 U.S.C. 103(a) as being unpatentable over Nakamura et al. (6,342,933) in view of Uchida et al. (6,137,548) further in view of Kajiwara et al. (5,801,542) further in view of Iwamoto et al. (5,710,607)

Regarding Claims 1, 3, 4, 5, 6, 7 and 11, Nakamura et al. disclose a liquid crystal display including driving circuit held between convex portion and elastic pressing portion formed on two box members. Liquid crystal display includes a metal box member, a mold member with a back light source, and the driving circuit substrate for driving the liquid crystal panel held by these two cage bodies, where the driving circuit substrate is held between a convex portion formed in one of the two cage bodies and an elastic pressing portion formed in the other box member, the driving circuit substrate is grounded to the metal box member through this holding portion and the driving circuit substrate is held without being secured. Nakamura et al. fail to disclose the required holding/engagement structure, depression/recess structure and the deformable/elastic structure. However, Uchida et al. disclose a mounting structure of protecting panel for an image device and mounting method thereof where the required holding/engagement structure is disclosed. Furthermore, Kajiwara et al. disclose a display panel inspection socket where the

required depression/recess structure is disclosed. Finally, Iwamoto et al. disclose an impact resistant liquid crystal apparatus where the required deformable/elastic structure is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required holding/engagement structure, depression structure and the deformable/elastic structure as taught by Uchida et al., Kajiwara et al., and Iwamoto et al. respectively in order to have a liquid crystal display device with ease of manufacture.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fazli Erdem whose telephone number is (571) 272-1914. The examiner can normally be reached on M - F 8:00 - 5:00.
